TRINITY—A Natural Stone Alternative

Produced by Tiger Mountain Innovations LLC., Trinity Glass Products are individually handcrafted composite surfaces made from recycled glass and low-carbon cement. The surfaces are used for countertops, tabletops, wall cladding, exterior surfaces and more.

Offering the polished look of granite with earthy, muted colors and small particulates, Trinity satisfies the desire for a natural stone appearance without the negative environmental impacts. Trinity's design isn't flashy or overstated, complementing its surroundings in both contemporary and traditional homes.

Environmentally Friendly

Each Trinity slab is made from **70% recycled content** including non-tinted recycled glass.

Durable and Easy to Maintain

Because of its high glass content, Trinity Glass Products are extremely scratch resistant and heat resistant—although heat may damage the sealer. As with all stone and cement-based materials, surfaces must be sealed periodically with a stone sealant to ensure ongoing resistance to food and grease stains. However, if damaged by acid etching, the blemish can usually be polished out and the stone restored.

Sizes and Availability

Slab Size = 56" x 96"

Thickness = 3 cm (1 1/4")

Fabricates, installs and is maintained just like natural stone
